

Workstations

Complete line of Emergency Dispatch Equipment

Not every fire, police or 911 call center is identical. They vary in size, mission and available budgets. Our varied lines and ergonomic workstations can work in almost any dispatch center

Workstation Types

Modular steel workstations provide fixed mounting spaces for electronics. They can be assembled from individual steel modules that bolt together to form workstations of any size. Modules ship by UPS and assembled on site with common tools.

Non lift workstations can be equipped with articulating keyboard platforms and under surface storage. Various storage modules can be added to the system

Dual Surface workstations are equipped with two separately adjustable platforms. The display surface and input surfaces have separate lift devices and controls for maximum adjustability

Corner lift workstations include a large monitor surface with attached keyboard with separate vertical and tilt adjustments.

B.I.F.M.A. (Business and Institutional Furniture Manufacturers Association) workstations come in Corner lift and Dual lift. The workstations have an extended lift range of 22" – 48" providing for the 5th – 95th percentile users.
